

Unit 2C – Finding information

Level 2

Pupils begin to think about how they are going to undertake their task. They create and communicate information and ideas in different forms using text, images, pictures and sound. They find information from a given source using it to answer simple questions. Pupils explore the effects of making changes in models and simulations and store and retrieve work with some assistance. They are aware of the use of ICT in the outside world.

Teacher commentary:

Children are guided to databases online to search for information about a specific topic. Children have used this database to identify different types of birds.
